

Arush Gupta

Gurugram, India | +91-9660756638 | garush901@gmail.com | linkedin.com/in/arush-gupta-tech | github.com/Arushgup | AI Job Copilot (Live Demo)

Professional Summary

Software Engineer and GenAI/AI Engineer with 2+ years building scalable backend systems and production-grade LLM/RAG applications. Proficient in Java, Python, Spring Boot, FastAPI, LangChain, Kafka, and cloud-native microservices. Delivered enterprise platforms driving 20%+ cost optimization and 60%+ reduction in manual effort through GenAI automation, distributed systems, and CI/CD-driven engineering for Fortune 500 clients.

Technical Skills

Languages: Java, Python, SQL, JavaScript

AI / GenAI: LLMs (GPT-4, Claude), LangChain, RAG (Retrieval-Augmented Generation), Model Context Protocol (MCP), Prompt Engineering, Vector Embeddings, Vector Databases (FAISS, Pinecone), Agentic AI Workflows, NLP

Backend & Frontend: Spring Boot, FastAPI, React.js, REST APIs, Microservices, Django (basics)

Data Engineering: Apache Kafka, PySpark, ETL Pipelines, Stream Processing, Redis

Cloud & DevOps: Docker, Kubernetes, Azure, GCP, AWS (basics), CI/CD, GitHub Actions, System Design

Databases: MySQL, PostgreSQL, MongoDB, Database Design & Performance Optimization

Practices: Test-Driven Development (TDD), Unit & Integration Testing (JUnit, PyTest), Agile/Scrum, Distributed Systems

Professional Experience

Tredence Inc.

Software Engineer (Analyst) — Backend & GenAI

Gurugram, India

Aug 2023 – Present

- Designed and delivered scalable, distributed backend systems and GenAI-powered platforms, improving delivery timelines by **30%+** and cutting operational costs by **20%+** for Fortune 500 enterprise clients.
- Built production LLM and RAG applications using **LangChain** and prompt engineering to automate document and code understanding, reducing manual effort by **60%+**.
- Implemented **TDD** and automated **CI/CD** pipelines, achieving **99.9%** system reliability and 100% on-time delivery across 4+ production-grade platforms.
- Engineered high-throughput, event-driven architectures processing **1M+ records/day** using **Kafka** (dead-letter queues) and **Spring Boot** microservices.

Key Projects:

- Cloud Billing & Cost Optimization Platform** — Architected a distributed billing system (Kafka, Redis, Spring Boot) handling 1M+ records daily with real-time anomaly detection, saving **\$500K+** annually.
- LLM-Based ETL Code Converter (RAG Platform)** — Built an automated code-conversion platform (FastAPI, LangChain) with **90%+ accuracy** via semantic evaluation benchmarks, saving **\$300K+** in migration costs.

Personal Projects

AI Job Copilot | FastAPI, Spring Boot, Kafka, LangChain, Docker, JUnit | Live Demo

2024

- Developed end-to-end agentic microservices for job-search automation; LLM-powered resume parsing and semantic job matching via tool-calling/MCP-style agent orchestration, validated by unit and integration tests.
- Orchestrated a distributed multi-service deployment using **Docker** and **Kafka** for real-time, asynchronous event processing and message queuing.

AI-Powered Legal Process Outsourcing (LPO) Platform |

2025 – Present

- Building a tech-enabled LPO platform (**LLMs, RAG, Document AI**) helping small and mid-sized US law firms reduce the time and cost of reviewing legal and medical documents.
- Designed an **AI + human-expert** hybrid model (AI-assisted legal operations, human-in-the-loop): GenAI performs extraction, summarization, and document understanding, while trained legal and medical reviewers validate output to achieve law-firm-grade accuracy.

Education

Thapar Institute of Engineering & Technology

Bachelor of Engineering in Computer Science

Patiala, India

2019 – 2023
